ASBO International Announces Indoor Environmental Quality Advisory Group

Reston, VA—May 28, 2008—To meet the growing demand for indoor environmental training and consultative services among school districts nationwide, ASBO International has formed the Indoor Environmental Quality (IEQ) Advisory Group. The group will expand upon the scope of ASBO's previous Indoor Air Quality Resident Practitioner position.

Made possible through a grant from the U.S. Environmental Protection Agency, the IEQ Advisory Group will provide districts with the training and consultative solutions needed to address IEQ concerns, educate and train staff, and develop effective IEQ management programs through the utilization of EPA's suite of environmental management tools.

Members of the IEQ Advisory Group are John Gayetsky, environmental management specialist, and Kathy Prosser, environmental program facilitator.

Gayetsky brings to the position a wealth of experience in school environmental quality. For the past 15 years, he has served as an engineer, industrial hygienist, and technical advisor to the Ohio Department of Health and the Ohio Division of Safety & Hygiene. Prosser has more than 20 years of experience in program management, implementation, and evaluation through her work with both non-profit and private organizations, including the American Lung Association.

"We are excited to have John and Kathy join the ASBO team," said Pam Weber, CAE, FInstAM, director of professional development at ASBO International. "With the added specialization and expertise afforded by these two positions, ASBO will be able to reach more districts."

ASBO International, founded in 1910, is a professional organization of nearly 6,000 members that provides programs and services to promote the highest standards of school business management practices, professional growth, and the effective use of educational resources.
